THE USER FRIENDLY **MOBILE APP** CREATING SMART DATA FROM ALL HUMAN INTERVENTIONS

PARK MANAGEMENT

optimized by **4Op**

During the cycle of a renewable energy project, an enormous quantity of data is collected via sensors but also throughout different **field actors.** All this data is neither centralized nor correlated with the "Machine" data, nor interfaced with the industrial planification computer systems (e.g: CMMS…). It is neither collaboratively shared with the other project actors and cannot be treated in real time.

Park Management® responds to these needs by offering a **mobile platform,** very easy to use and versatile for all field operations.

Powered by **SAFENERGY**

Potential uses of Park Management®:

- **SAFETY**
- **CONCEPTION & CONSTRUCTION**
- **INSPECTIONS & MAINTENANCE**
- **LAND MANAGEMENT**
